The physics of neutron star crusts is vast, involving many different research fields, from nuclear and condensed matter physics to general relativity. Stars develop over their lifetimes but don't reproduce, so the notion of natural selection does not apply to them. (Phys.org) —A trio of researchers working in Spain suggests in a paper published in the journal Nature Physics that the surface of some neutron stars might be "lumpy."

Astronomy 112: Physics of Stars Problem set 1 solutions 1. Magnitudes: 15 points The absolute bolometric magnitude, M , of the Sun is 4.755. (a) Show that that the absolute magnitude of a star with luminosity L is given by $M = 4.755 - 2.5 \log L/L_\odot$. Solution: The relation between magnitudes and flux is given by Hershel's calibration of 5
