Inspired by the other answers here, I created an SQL function to do a sequence migration. The function moves a primary key sequence to a new contiguous sequence starting with any value (≥ 1) either inside or outside the existing sequence range.

postgresql - How to reset sequence in postgres and fill id ...

See my answer below. Again, it depends on a whole lot of factors including row size, joins, etc. It is going to be impossible for anyone to give you a definitive answer other than to say "every dbms can do this.. depending on your data" Technically speaking, the differences in performance amongst the various dbms are going to come down to the actual data and how you dice it.

sql server - Database that can handle >500 millions rows ...

I don't believe this is the answer the poser of the ditloid intended, but if not, it is a coincidence most strange. Call of Duty 4, the video game, contains Mission 5, the Bog.
