gene to protein webquest - nclark.net

RNA and Protein Synthesis Answer Key. The codon molecule is a piece of mRNA that enters the nucleus and transcribes the sequence of nitrogen bases from the DNA strand. The DNA serves as the blueprint for the proteins that will be created through the process of protein synthesis. The mRNA then leaves the nucleus and travels to the ribosomes where other forms of RNA translate the code.

RNA and Protein Synthesis Answer Key - HelpTeaching.com

The smallest part of proteins are amino acids. There are 20 amino acids. One or more can make up a protein, depending on the specific protein. Each amino acid is represented by at least one codon. Because each codon is coded with three letters, the string of letters used to represent the amino acids in a specific protein can get pretty long.

DNA WebQuest - Hazleton Area High School

There are 8 pages in this Protein Synthesis Webquest. This activity incorporates websites and online simulations that will help enhance learning and keep students engaged! This can also serve as a great supplement to students who need extra help on the concept of protein synthesis.
