

## *Phet Density Activity Answers*

[Download File PDF](#)

*Phet Density Activity Answers - As recognized, adventure as with ease as experience roughly lesson, amusement, as competently as bargain can be gotten by just checking out a books phet density activity answers after that it is not directly done, you could resign yourself to even more re this life, with reference to the world.*

*We present you this proper as well as simple showing off to acquire those all. We have the funds for phet density activity answers and numerous books collections from fictions to scientific research in any way. along with them is this phet density activity answers that can be your partner.*

### **Phet Density Activity Answers**

Why do objects like wood float in water? Does it depend on size? Create a custom object to explore the effects of mass and volume on density. Can you discover the relationship? Use the scale to measure the mass of an object, then hold the object under water to measure its volume. Can you identify all the mystery objects?

Describe how the concept of density relates to an object's mass and volume. Explain how objects of similar mass can have differing volume, and how objects of similar volume can have differing mass. Explain why changing an object's mass or volume does not affect its density (ie, understand density as an intensive property).

PhET Simulation: Density. published by the PhET. This simulation provides a highly visual, intuitive way for students to explore how density is related to an object's mass and volume. Using a virtual water tank, users drop various objects to see what floats and what sinks. Use the mouse to submerge the object and see how much fluid it displaces.

### **PhET Simulation: Density**

density of air is 1.2 g/L and the density of helium is 0.1786 g/L. Assume each balloon has a mass of 3 g. (Hint: First calculate how much extra mass a helium balloon can carry) Just like the example in the lesson, one balloon can lift 10.2 g. If each balloon has a mass of 3 g, then each balloon can carry 7.2 g.  $75 \text{ kg} / 7.2 \text{ g} = 10,417$  Balloons.
