Object-oriented programming (OOP) is a programming paradigm based on the concept of "objects", which can contain data, in the form of fields (often known as attributes), and code, in the form of procedures (often known as methods). A feature of objects is an object's procedures that can access and often modify the data fields of the object with which they are associated (objects have a notion ...

A compiler is a computer program that translates computer code written in one programming language (the source language) into another programming language (the target language). The name compiler is primarily used for programs that translate source code from a high-level programming language to a lower level language (e.g., assembly language, object code, or machine code) to create an ...

OnlineDegree.com, an NCCRS member since February 2018, is making higher education more accessible and affordable for everyone. University and college education can be costly and normal distractions of work, bills, and home life, often prevent someone from getting started with education or being able to dedicate time and money to a traditional 4-year degree program.

I Fixed-Size Data. Every programming language comes with a language of data and a language of operations on data. The first language always provides some forms of atomic data; to represent the variety of information in the real world as data, a programmer must learn to compose basic data and to describe such compositions.
