A two-person game has two players. A game in which one player wins what the other player loses is called a zero-sum game. The theory of two-person zero-sum games is the foundation of more complicated games, such as games with more than two players (n-person games), and games in which the players can benefit through cooperation, with or without collusion, side payments, or binding agreements.

The Hamming weight of a string is the number of symbols that are different from the zero-symbol of the alphabet used. It is thus equivalent to the Hamming distance from the all-zero string of the same length. For the most typical case, a string of bits, this is the number of 1's in the string, or the digit sum of the binary representation of a given number and the ℓ_1 norm of a bit vector.
