The method of standard addition is a type of quantitative analysis approach often used in analytical chemistry whereby the standard is added directly to the aliquots of analyzed sample. This method is used in situations where sample matrix also contributes to the analytical signal, a situation known as the matrix effect, thus making it impossible to compare the analytical signal between sample ...

Designing the perfect warehouse is an area where even angels can fear to tread. The devil is in managing myriad details, complicated by the fact that a design made in heaven is never the same for any two facilities-even within the same organization. While the process is exhaustively detail-laden ...

Two most important solutions used in alkalimetric titrations are solution of hydrochloric acid and solution of sodium hydroxide. Both are used as titrants, and in some analytical procedures requiring back titration they can be both used as a first reagent added in excess.

### **Solutions used in acid-base titrations**

An acid-base titration is a method of quantitative analysis for determining the concentration of an acid or base by exactly neutralizing it with a standard solution of base or acid having known concentration. A pH indicator is used to monitor the progress of the acid-base reaction.If the acid dissociation constant (pKa) of the acid or base dissociation constant (PKb) of base in the analyte ...

Intracellular signaling pathways are mediated by changes in protein abundance and post-translational modifications. A common approach for investigating signaling mechanisms and the effects induced by synthetic compounds is through overexpression of recombinant reporter genes. Genome editing with CRISPR/Cas9 offers a means to better preserve native biology by appending reporters directly onto ...

Fig. 1: Chemical structure of ethylene oxide. The molecular formula for ethylene oxide is  $H_2COCH_2$ , and its relative molecular mass is 44.05. At room temperature (25 °C) and normal atmospheric pressure, ethylene oxide is a colourless, highly reactive, and flammable gas with a characteristic ethereal odour.

Saul Kripke is a philosopher and logician and emeritus professor at Princeton. He is best known for reintroducing modal concepts, such as necessity and possibility, with his landmark works Naming and Necessity and Identity and Necessity, as well as his popularizing Gottfried Leibniz's notion of "possible worlds" as a way of analyzing the concepts of 'a priori', 'analytic', and 'necessary'.
