Quadratic Equations and Inequalities - Algebra 2 - Brightstorm

To solve a quadratic inequality we must determine which part of the graph of a quadratic function lies above or below the (x) -axis. An inequality can therefore be solved graphically using a graph or algebraically using a table of signs to determine where the function is positive and negative. Worked example 16: Solving quadratic inequalities

Solving Quadratic Inequalities - Math Is Fun

Solving linear inequalities, such as " $x + 3 > 0$ ", was pretty straightforward, as long as you remembered to flip the inequality sign whenever you multiplied or divided through by a negative (as you would when solving something like " $-2x < 4$ "). There is a big jump, though, between linear inequalities and quadratic inequalities.
