Similar triangles. In geometry two triangles, ABC and $A'B'C'$, are similar if and only if corresponding angles have the same measure: this implies that they are similar if and only if the lengths of corresponding sides are proportional. It can be shown that two triangles having congruent angles (equiangular triangles) are similar, that is, the corresponding sides can be proved to be ...

The coordination geometry of an atom is the geometrical pattern formed by atoms around the central atom. Inorganic coordination complexes. In the field of inorganic coordination complexes it is the geometrical pattern formed by the atoms in the ligands that are bonded to the central atom in a molecule or a coordination complex. The geometrical arrangement will vary according to the number and ...

Kinetic vs. Thermodynamic Control in Organic Reactions. John Cullen. The concept of kinetic vs. thermodynamic control of reactions is an important one in organic chemistry. There are a number of reactions known in which there are two (or more) possible reaction products of a reaction, and one product (kinetic product) predominates when the reaction is done at low temperature.

Laplace Transform. The Laplace transform is an integral transform perhaps second only to the Fourier transform in its utility in solving physical problems. The Laplace transform is particularly useful in solving linear ordinary differential equations such as those arising in the analysis of electronic circuits.. The (unilateral) Laplace transform (not to be confused with the Lie derivative ...
