ONID

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

A primate (/ˈpɹaɪmɪt/ PRY-mayt) (from Latin *primat-*, from *primus*: "prime, first rank") is a eutherian mammal constituting the taxonomic order Primates. Primates arose 85–55 million years ago from small terrestrial mammals (Primates), which adapted to living in the trees of tropical forests: many primate characteristics represent adaptations to life in this challenging ...

FROM EVIDENCE TO ACTION

This article directly addresses the scientific evidences in favor of macroevolutionary theory and common descent. It is specifically intended for those who are scientifically minded but, for one reason or another, have come to believe that macroevolutionary theory explains little, makes few or no testable predictions, or is unfalsifiable.
