Plant growth and Carbon Dioxide are directly related. Plant growth requires a tremendous amount of Carbon Dioxide (also known as CO<sub>2</sub>). At the center of every plant cell is an atom of Carbon, which the plant has absorbed from the surrounding air. When all other growing conditions are kept ideal, Carbon Dioxide becomes the growth limiting factor. This means, as you increase the CO<sub>2</sub> in your garden ...

Hydroponics is a subset of hydroculture, which is a method of growing plants without soil by instead using mineral nutrient solutions in a water solvent. Terrestrial plants may be grown with only their roots exposed to the nutritious liquid, or the roots may be physically supported by an inert medium such as perlite or gravel.. The nutrients used in hydroponic systems can come from an array of ...

Introduction. Vegetable oil can be used as diesel fuel just as it is, without being converted to biodiesel. The downside is that straight vegetable oil (SVO) is much more viscous (thicker) than conventional diesel fuel or biodiesel, and it doesn't burn the same in the engine -- many studies have found that it can damage engines.
