As was discussed in Lesson 1, a wave is produced when a vibrating source periodically disturbs the first particle of a medium. This creates a wave pattern that begins to travel along the medium from particle to particle. The frequency at which each individual particle vibrates is equal to the frequency at which the source vibrates. Similarly, the period of vibration of each individual particle ...

Some partial differential equations can be solved exactly in the Wolfram Language using `DSolve[eqn, y, x1, x2]`, and numerically using `NDSolve[eqns, y, x, xmin, xmax, t, tmin, tmax]`.. In general, partial differential equations are much more difficult to solve analytically than are ordinary differential equations. They may sometimes be solved using a Bäcklund transformation, characteristics ...
