In cellular biology, active transport is the movement of molecules across a membrane from a region of their lower concentration to a region of their higher concentration—against the concentration gradient. Active transport requires cellular energy to achieve this movement. There are two types of active transport: primary active transport that uses ATP, and secondary active transport that ...

Because Nutto is less stable than Calmo, it is more chemically reactive and will react in ways Calmo would've never dreamed of reacting. (When Nutto reacts (doing whatever work that was desired in the first place), the phosphate group (P i) is freed and ready to be used again to make a new ATP molecule. The molecules used to make ATP (ADP and P i) are constantly recycled.
