Quantum Mechanics Claude Cohen Tannoudji

Claude Cohen-Tannoudji (born 1 April 1933) is a French physicist. He shared the 1997 Nobel Prize in Physics with Steven Chu and William Daniel Phillips for research in methods of laser cooling and trapping atoms. Currently he is still an active researcher, working at the École Normale Supérieure in Paris.

Quantum optics (QO) is a field of research that uses semi-classical and quantum-mechanical physics to investigate phenomena involving light and its interactions with matter at submicroscopic levels. In other words it is quantum mechanics applied to photons or light.

Because of the nature of quantum mechanics, no single image has been entirely satisfactory at visualizing the atom's various characteristics, which thus forces physicists to use complementary pictures of the atom to explain different properties. In some respects, the electrons in an atom behave like particles orbiting the nucleus. In others, the electrons behave like waves frozen in position ...

Bose-Einstein condensate: Bose-Einstein condensate (BEC), a state of matter in which separate atoms or subatomic particles, cooled to near absolute zero (0 K, -273.15°C , or -459.67°F ; K = kelvin), coalesce into a single quantum mechanical entity—that is, one that can be described by a wave function—on a near-macroscopic

Grundlagen. Die Grundlagen der Quantenmechanik wurden zwischen 1925 und 1932 von Werner Heisenberg, Erwin Schrödinger, Max Born, Pascual Jordan, Wolfgang Pauli, Paul Dirac, John von Neumann und weiteren Physikern erarbeitet, nachdem erst die klassische Physik und dann die älteren Quantentheorien bei der systematischen Beschreibung der Vorgänge in den Atomen versagt hatten.

C'est incontestablement la résolution du problème du rayonnement du corps noir qui a marqué le début de la mécanique quantique. Au début du XX e siècle, Max Planck résout en effet ce problème en faisant l'hypothèse que l'énergie des atomes ne peut s'échanger que par multiples de quantités proportionnelles à la fréquence du rayonnement, selon la formule désormais célèbre :
