The Turing test, developed by Alan Turing in 1950, is a test of a machine's ability to exhibit intelligent behaviour equivalent to, or indistinguishable from, that of a human. Turing proposed that a human evaluator would judge natural language conversations between a human and a machine designed to generate human-like responses. The evaluator would be aware that one of the two partners in ...

This table reveals how the authors think about dimensional analysis. They see the starting factor as something given; there can be only one starting factor; it has only one unit associated with it, and it forms a special "equivalent relationship" with the answer unit, which, being equivalent, must also have only a single unit associated with it.
