1. Base your answer to the following question on ... Which rock type is found at a depth of 1,800 feet at this location? Base your answers to questions 2 through 6 on the diagrams below which represent two rock outcrops found several miles apart in New York State. Individual rock layers are lettered, and fossils and rock ...

1. Base your answer to the following question on the Earth ...

mine the sequence of events from oldest to most recent. Sequencing events establishes a relative age of a stratum. The process of showing that rocks or geologic events occurring at different locations are the same age is called correlation. Index fossils and similar rocks types help geologists establish correlations between distance rock outcrops.

8.1 Relative Dating - Earth science

Rock Layer Correlation Lab. Correlation is the process used by geologists (or stratigraphers) to "match" rock layers and formations of one outcrop to rock layers and formations of another outcrop that are of similar age. Correlation is done by matching rock layers by rock type, grain size, the presence of fossils and other distinctive features.

Earth Science - Red Hook Central Schools

We can use index fossils and key beds to correlate, or match rock layers that are the same age. By doing this we can then place other layers of rocks in order of their relative ages to find the oldest and youngest rocks in a series of outcrops. For Example: Examine the outcrop below and determine which layers are the oldest and youngest.

Correlating Rock Layers — Mr. Mulroy's Earth Science

metamorphic rock that was created by this intrusion? Sequence #13 A. State the name of the three rock layers found in Box B from oldest to youngest. B. State the name of the two rock layers found in Box C from oldest to youngest. B. State the name of the three rocks found in Box D from oldest to youngest. Sequence #14
