Magnetic resonance imaging (MRI) is a medical imaging technique used in radiology to form pictures of the anatomy and the physiological processes of the body in both health and disease. MRI scanners use strong magnetic fields, magnetic field gradients, and radio waves to generate images of the organs in the body. MRI does not involve X-rays or the use of ionizing radiation, which distinguishes ...

Magnetic Resonance Imaging (MRI): ACR (American College of Radiology) Accredited Facility In December of 1985, Reno Diagnostic Centers introduced MRI technology to Nevada. Invented in the early 1980s, MRI uses the principles of nuclear magnetic resonance to allow us to look inside the body without the use of X-rays. MRI uses the body's own energy, [...]

Clinical requirements. Note: Effective immediately, all health care workers who come into contact with patients at publicly-funded health care facilities or in the community, including at long-term-care facilities, will have to get the influenza vaccine or wear a mask during flu season. This policy affects all students who will be entering a clinical setting.

A mid continued furor over lurking danger, it is indeed astonishing to find, in the annals of radiology and neurosurgery, only one reported fatality, this being also the only adverse incident caused by an implanted aneurysm clip moving in the magnetic field of an MRI scanner. One preventable death is, of course, one death too many, and no reasonable safety measure should be spared, nor any ...
