When you think of things that grow, you probably first think of living things that add mass through self-nourishment. But nonliving things that grow include crystals, glaciers and mountains. A host of abstract concepts can be said to grow as well, including cultural and political movements.

Non-Living Things That Grow | Sciencing

In probability theory, a log-normal (or lognormal) distribution is a continuous probability distribution of a random variable whose logarithm is normally distributed. Thus, if the random variable X is log-normally distributed, then $Y = \ln(X)$ has a normal distribution. Likewise, if Y has a normal distribution, then the exponential function of Y , $X = \exp(Y)$, has a log-normal distribution.

Log-normal distribution - Wikipedia

In a prior Q&A we explained that biological tissues are anisotropic. They have multiple diffusion coefficients that vary by direction and are represented by the diffusion tensor, a 3x3 array of numbers. The term "trace" comes from matrix algebra where it means the sum of diagonal elements of such an array.

Maths Puzzles - Transum

We investigate the determinants of the choice between two forms of corporate divestitures—spin-

offs versus sell-offs. We hypothesize that the choice is driven by the pre-divestiture market valuation of divesting firms relative to their intrinsic value, the pre-divestiture performance of the assets being divested relative to their full potential, and the prevailing degree of investor optimism ...
