In chemistry, resonance is a way of describing bonding in certain molecules or ions by the combination of several contributing structures (or forms, also variously known as resonance structures or canonical structures) into a resonance hybrid (or hybrid structure) in valence bond theory. It has particular value for describing delocalized electrons within certain molecules or polyatomic ions ...

We're now posting original research! Yes, as of late November we are hosting our own original study titled An Examination of the Effect of Prior Experience, Age, and Gender in Non-Food Blending Predictions. Though this title sounds pretty scientific, it just refers to an experiment I did with putting rubber balls in a blender to see...

The Cavalcade o' Chemistry | Celebrating 20 years of ...

Biomimetics or biomimicry is the imitation of the models, systems, and elements of nature for the purpose of solving complex human problems. The terms "biomimetics" and "biomimicry" derive from Ancient Greek: βίος (bios), life, and μίμησις (), imitation, from μιμεῖσθαι (mīmeisthai), to imitate, from μῖμος (mimos), actor. A closely related field is bionics.

Amyloid spores of Amanita brunnescens. Amyloid. An amyloid reaction is a bluish-black color change when something is mounted for the microscope in an iodine-based reagent like Melzer's Reagent or Lugol's Reagent.. Spores are typically what is looked at to determine whether the reaction is amyloid or not—but other microscopic structures sometimes demonstrate the color change, too.
