In biology, a gene is a sequence of nucleotides in DNA or RNA that codes for a molecule that has a function. During gene expression, the DNA is first copied into RNA. The RNA can be directly functional or be the intermediate template for a protein that performs a function. The transmission of genes to an organism's offspring is the basis of the inheritance of phenotypic trait.

Mendelian inheritance is a type of biological inheritance that follows the laws originally proposed by Gregor Mendel in 1865 and 1866 and re-discovered in 1900. These laws were initially controversial. When Mendel's theories were integrated with the Boveri-Sutton chromosome theory of inheritance by Thomas Hunt Morgan in 1915, they became the core of classical genetics.

Class practical. Reebops are imaginary animals, made from marshmallows (or foam packing pieces). Their features are determined by the characteristics encoded in their chromosomes. Both parents are heterozygous for all their characteristics (except their sex). Making models in this way has proved very popular with post-16 students – many of whom keep their baby Reebops at home and talk of them ...
