biology photosynthesis review Flashcards | Quizlet

The rate of respiration depends on the energy needs of the plant while the rate of photosynthesis varies depending on the availability of light energy, if all other conditions are maintained the same. In a situation in which the respiration rate is greater than the photosynthesis rate, glucose consumption is higher than glucose production.

Photosynthesis - Biology Questions

Sunlight is the energy source for photosynthesis. Photons of light are captured and the energy is transferred to molecules in the plant cells. That energy is then used to convert the inorganic compounds that contain little energy into organic compounds that contain a lot of energy that the plant can use. Return to Lab Review Page
