Let's see if we can simplify 5 times the square root of 117. So 117 doesn't jump out at me as some type of a perfect square. So let's actually take its prime factorization and see if any of those prime factors show up more than once. So clearly it's an odd number. It's clearly not divisible by 2. To ...

We can use the product rule of radicals (found below) in reverse to help us simplify the n th root of a number that we cannot take the n th root of as is, but has a factor that we can take the n th root of. If there is such a factor, we write the radicand as the product of that factor times the appropriate number and proceed.
