Population ecology - Logistic population growth: The geometric or exponential growth of all populations is eventually curtailed by food availability, competition for other resources, predation, disease, or some other ecological factor. If growth is limited by resources such as food, the exponential growth of the population begins to slow as competition for those resources increases.

The Population Bomb is a best-selling book written by Stanford University Professor Paul R. Ehrlich and his wife, Anne Ehrlich (who was uncredited), in 1968. It predicted worldwide famine in the 1970s and 1980s due to overpopulation, as well as other major societal upheavals, and advocated immediate action to limit population growth. Fears of a "population explosion" were widespread in the ...

Mathematics, an international, peer-reviewed Open Access journal. In this paper, we prove a new fixed point theorem for a multi-valued mapping from a complete extended b-metric space  $U$  into the non empty closed and bounded subsets of  $U$ , which generalizes Nadler's fixed point theorem. We also establish some fixed point results, which generalize our first result.

The Student's t-test is a statistical test that compares the mean and standard deviation of two samples to see if there is a significant difference between them. In an experiment, a t-test might be used to calculate whether or not differences seen between the control and each experimental group are a factor of the manipulated variable or simply the result of chance.
