The distinguishing feature of the PID controller is the ability to use the three control terms of proportional, integral and derivative influence on the controller output to apply accurate and optimal control. The block diagram on the right shows the principles of how these terms are generated and applied.

A typical OLED is composed of a layer of organic materials situated between two electrodes, the anode and cathode, all deposited on a substrate. The organic molecules are electrically conductive as a result of delocalization of pi electrons caused by conjugation over part or all of the molecule. These materials have conductivity levels ranging from insulators to conductors, and are therefore ...

3.1. Planning phase. The first step of the planning phase referred to the identification of the need for a systematic review. As described in the previous section, although there is active research towards the adoption of cloud computing in the healthcare sector, there is no systematic review that summarizes all research findings and offers a deeper insight into the implications to research ...
