In mathematics and science, a nonlinear system is a system in which the change of the output is not proportional to the change of the input. Nonlinear problems are of interest to engineers, biologists, physicists, mathematicians, and many other scientists because most systems are inherently nonlinear in nature. Nonlinear dynamical systems, describing changes in variables over time, may appear ...

The flow map  $x \mapsto F(x)$  and the jump map  $x \mapsto G(x)$  are set valued;  $C$  is the flow set and  $D$  the jump set. This model describes a wide variety of phenomena while its simple structure facilitates the development of both a stability theory for hybrid systems and procedures for the design of hybrid control systems.
