Aristotelian physics is a form of natural science described in the works of the Greek philosopher Aristotle (384–322 BCE). In his work *Physics*, Aristotle intended to establish general principles of change that govern all natural bodies, both living and inanimate, celestial and terrestrial – including all motion (change with respect to place), quantitative change (change with respect to size ...

The Standard Model explains how the basic building blocks of matter interact, governed by four fundamental forces. The theories and discoveries of thousands of physicists since the 1930s have resulted in a remarkable insight into the fundamental structure of matter: everything in the universe is ...

### **The Standard Model | CERN**

Maybe the fundamental physics our universe did not, as the current Big Bang Theory suggest, solidify in an infinitesimal moment but were variable and became unchanging much later (BBT itself already indicates everything traveled faster than light for a bit).

### **Possible Answers to the Fermi Paradox**

In this wholly online module, you'll examine fundamental concepts in physics and the space sciences. Its nine highly relevant topics and practical activities will help prepare you to study physics, astronomy or planetary science at OU level 2.
