*Pulley Lab Answers - Thank you very much for reading pulley lab answers. As you may know, people have look numerous times for their favorite readings like this pulley lab answers, but end up in malicious downloads.*

*Rather than reading a good book with a cup of tea in the afternoon, instead they juggled with some malicious bugs inside their laptop.*

*pulley lab answers is available in our book collection an online access to it is set as public so you can get it instantly.*

*Our books collection spans in multiple locations, allowing you to get the most less latency time to download any of our books like this one.*

*Kindly say, the pulley lab answers is universally compatible with any devices to read*

Pulley Lab. Use a pulley system to lift a heavy weight to a certain height. Measure the force required to lift the weight using up to three fixed and three movable pulleys. The weight to be lifted and the efficiency of the pulley system can be adjusted, and the height of the weight and the total input distance are reported.

A pulley is a simple machine consisting of a wheel turning on an axle. Pulleys are often used singly and in combinations to do work. If energy is conserved for a machine, then the work done by the machine must be equal to the work put into the machine: Work out = Work in

PULLEY LAB PHYSICS 212 WORKSHEET Pulleys are simple machines—i.e., they allow you to change the direction and/or the magnitude of the force you exert on an object. For each question below, consider the pulley systems shown on the next page. After you have predicted a result for each question, you will be directed on page 3

I would suggest you play with the lab and then make up the appropriate length strings. I like the pink mason line, it's easy to see from across the room, so I can tell what's going on at every work station. It's also easy to find when things are misplaced. mass 2.55 Kg:  $a = 0.5 \times 1/2.55 = 0.195$  (Answer: 0.196) Note: Although errors due to rounding, the equation is still correct due to the relative closeness of all answers. Conclusion: In this lab we learned the relationship that occurs when the mass of an object is increased while the net force is left constant.
