Definition of a Parabola . The parabola is defined as the locus of a point which moves so that it is always the same distance from a fixed point (called the focus) and a given line (called the directrix). [The word locus means the set of points satisfying a given condition. See some background in Distance from a Point to a Line.]. In the following graph,

75 Comments on "How to find the equation of a quadratic function from its graph" Alan Cooper says: 18 May 2011 at 12:08 am [Comment permalink] Thanks, once again, for emphasizing "real" math (for both utility and understanding).

How to find the equation of a quadratic function from its ...

Mathematics - Mathematics in ancient Egypt: The introduction of writing in Egypt in the predynastic period (c. 3000 bce) brought with it the formation of a special class of literate professionals, the scribes. By virtue of their writing skills, the scribes took on all the duties of a civil service: record keeping, tax accounting, the management of public works (building projects and the like ...

It is sometimes alleged that the Greeks had no algebra, but this is inaccurate. By the time of Plato, Greek mathematics had undergone a drastic change. The Greeks created a geometric algebra where terms were represented by sides of geometric objects, usually lines, that had letters associated with them, and with this new form of algebra they were able to find solutions to equations by using a ...

Revision Notes on Parabola. The general equation of a conic is $ax^2 + 2hxy + by^2 + 2gx + 2fy + c = 0$. Here if $e = 1$ and $D \neq 0$, then it represents a parabola. The general equation of parabola is $(y - y_0)^2 = (x - x_0)$, which has its vertex at (x_0, y_0) . The general equation of parabola with vertex at $(0, 0)$ is given by $y^2 = 4ax$, and it opens rightwards. The parabola $x^2 = 4ay$ opens upwards.
