This course introduces students to the modeling, quantification, and analysis of uncertainty. The tools of probability theory, and of the related field of statistical inference, are the keys for being able to analyze and make sense of data. These tools underlie important advances in many fields, from the basic sciences to engineering and management.

Statistics - Random variables and probability distributions: A random variable is a numerical description of the outcome of a statistical experiment. A random variable that may assume only a finite number or an infinite sequence of values is said to be discrete; one that may assume any value in some interval on the real number line is said to be continuous.

Statistics is a branch of mathematics working with data collection, organization, analysis, interpretation and presentation. In applying statistics to, for example, a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model process to be studied. Populations can be diverse topics such as "all people living in a country" or ...

This hub is all about calculating lottery probability or odds. In order to make it relevant, I decided to base it on the Grandlotto 6/55, the lottery game with the biggest prize money here in the Philippines. There will be two different cases in the hub: the probability of winning the game with all six numbers matching, and the probability of having n numbers matching.

The high losses sustained due to electrical distribution fires do not imply that the systems are unreliable. There are about 270 million people in the US, occupying about 100 million housing units, with the average housing unit having 5.4 rooms [3]. This means there are 2.7 persons per housing unit, or 2 rooms per person.

Multinomial Application: Gives probability of exactly n_i outcomes of event i , for $i = 1, 2, \dots, k$ in n independent trials when the probability p_i of event i in a single trial is a constant. Used frequently in quality control and other industrial problems. Example: Four companies are bidding for each of three contracts, with specified success probabilities. What is the probability that a ...
