Object-oriented programming (OOP) is a programming paradigm based on the concept of "objects", which can contain data, in the form of fields (often known as attributes), and code, in the form of procedures (often known as methods). A feature of objects is an object's procedures that can access and often modify the data fields of the object with which they are associated (objects have a notion ...

Logic (from the Ancient Greek: λογική, romanized: logikḗ) is the systematic study of the form of valid inference, and the most general laws of truth. A valid inference is one where there is a specific relation of logical support between the assumptions of the inference and its conclusion. In ordinary discourse, inferences may be signified by words such as therefore, thus, hence, ergo ...

Although iteration markers and guards can help, they do have weaknesses. The guards can't indicate that a set of guards are mutually exclusive, such as the two on Figure 4.5. Both notations work only with a single message send and don't work well when several messages coming out of a single activation are within the same loop or conditional block.
