There are 2 energy types and these are classified into 9 forms kinetic (mechanical, electrical, thermal, radiant and sound energy) and potential (chemical, nuclear, gravitational, elastic energy). Let's find out more about these with some examples to help figure out how they "matter" in our daily life,

The 2 types and 9 forms of Energy - Kinetic and Potential

The farthest I have gotten is getting the Air Mass $\sim \sec x$ where x is your angle from the zenith but I don't know how I would incorporate that into a line equation, and also haven't been able to find any references on this anywhere. Which leads me to believe I am missing something simple because this experiment has been done before. if you got the email i sent you can see what i mean
