A piecewise linear function is a function composed of some number of linear segments defined over an equal number of intervals, usually of equal size. For example, consider the function $y=x^3$ over the interval $[1,2]$. If $y(x)$ is approximated by a piecewise linear function over an increasing number of segments, e.g., 1, 2, 4, and 8, the accuracy of the approximation is seen to improve as the ...
