The Pollyanna principle (also called Pollyannaism or positivity bias) is the tendency for people to remember pleasant items more accurately than unpleasant ones. Research [citation needed] indicates that at the subconscious level, the mind has a tendency to focus on the optimistic; while at the conscious level, it has a tendency to focus on the negative.

Two papers in Numeracy reveal problems with the graphic introduced in the 1999 Kruger and Dunning paper. Subsequent researchers used it,  $(y - x)$  versus  $(x)$  scatter plots, and related variants for nearly two decades. The authors show how a major part of the body of literature that used these approaches seems to have mistaken and interpreted mathematical artifacts as the products of human behavior.

The crisis of the Democrats is becoming more evident each week. Those of us who have been loudly predicting for years that the Russian-collusion argument would be exposed as a defamatory farce, and that the authors of it would eventually pay for it, are bemused at the fallback position of the Trump-haters
