As described by the third of Newton's laws of motion of classical mechanics, all forces occur in pairs such that if one object exerts a force on another object, then the second object exerts an equal and opposite reaction force on the first. The third law is also more generally stated as: "To every action there is always opposed an equal reaction: or the mutual actions of two bodies upon each ...

Work is the product of force and distance. In physics, a force is said to do work if, when acting, there is a movement of the point of application in the direction of the force.. For example, when a ball is held above the ground and then dropped, the work done on the ball as it falls is equal to the weight of the ball (a force) multiplied by the distance to the ground (a displacement).

In meccanica la quantità di moto di un oggetto massivo è una grandezza vettoriale definita come il prodotto della massa dell'oggetto per la sua velocità.. Si tratta di una grandezza fisica conservativa, ovvero che rimane uguale nel tempo in assenza di forze esterne al sistema applicate all'oggetto.. Talvolta il vettore quantità di moto viene denominato momento lineare, per evidenziare il ...

The Bauhaus, Barry Bergdoll writes in the New York Times of the German design school founded a century ago last month, "lasted just 14 years before the Nazis shut it down. And yet in that time it proved a magnet for much that was new and experimental in art, design and architecture — and for decades after, its legacy played an outsize role in changing the physical appearance of the daily ...
