Physics (from the Ancient Greek φύσις physis meaning "nature") is the fundamental branch of science. The primary objects of study are matter and energy. Physics is, in one sense, the oldest and most basic academic pursuit; its discoveries find applications throughout the natural sciences, since matter and energy are the basic constituents of the natural world.

If there is only one charge, call it q_1 , there is no force at any random point q . A force acts on a material object. There is no force "at" an empty point in space. It is only when you place another charge q at some point in space, that the charge q has a force acting on it, because of your original charge q_1 . If there is only one charge, it generates an electric field, not force, at every ...
