Paramecium Homeostasis. Observe how a paramecium maintains stable internal conditions in a changing aquatic environment. Water moves into the organism by osmosis, and is pumped out by the contractile vacuole. The concentration of solutes in the water will determine the rate of contractions in the paramecium.

Paramecium Homeostasis - Lesson Info : ExploreLearning

Paramecium are heterotrophs, meaning they must consume food for their energy. Food enters the paramecium through the mouth pore (color orange) and goes to the gullet (color dark blue). The area of the paramecium appears pinched inward and is called the oral groove, cilia sweep food into this area. At the end of the gullet, food vacuoles are formed.

Paramecium Coloring - The Biology Corner

Name _____ The Paramecium (modified from The Biology Corner - Worksheets and Lessons)

Paramecium are unicellular protozoans. They live in quiet or stagnant ponds and are an essential part of the food chain. They feed on algal scum and other microorganisms, and other small organisms eat them.

Name ...

the paramecium against a sheet of colored paper. You don't want the cilia glued down. 10. Label the sheet "Paramecium," and then identify the different parts as shown. You can always add more parts to the model. How to Make a Model of an Amoeba Materials White construction paper Three different colors of construction paper

It's So Simple: Kingdom Monera (Bacteria)

Data Analysis: Create a graph to show how the populations of paramecium changed over 16 days,

each grown alone and then together. You will need to include: a title, labels for the x axis and y axis, 4 lines (each a different color), a key, and correct units.
