A mind map is a diagram used to represent words, ideas, tasks, or other items linked to and arranged around a central key word or idea. Especially in British English, the terms spidergram and spidergraph are more common,[1] but they can cause confusion with the term spider diagram used in mathematics and logic.

Pattern recognition is the automated recognition of patterns and regularities in data. Pattern recognition is closely related to artificial intelligence and machine learning, together with applications such as data mining and knowledge discovery in databases (KDD), and is often used interchangeably with these terms. However, these are distinguished: machine learning is one approach to pattern ...

Müllerian mimicry was proposed by the German zoologist and naturalist Johann Friedrich Theodor Müller (1821–1897), always known as Fritz. An early proponent of evolution, Müller offered the first explanation for resemblance between certain butterflies that had puzzled the English naturalist Henry Walter Bates in 1862. Bates, like Müller, spent a significant part of his life in Brazil, as ...

It can make it easier to think that classes map to tables, and in a way they do, but not always directly. Except for very simple databases you will never have a one-to-one mapping of classes to tables, something you will see later in this article with regards to inheritance mapping. However, a common theme that you will see throughout this article is that a one class to one table mapping is ...
