The Physics Classroom says: The Doppler shift can be observed for any wave, not just sound waves. For light waves, an upward shift in frequency means that a light wave is shifted towards the blue end of the ROYGBIV spectrum. This occurs for sources of light that are moving towards us.

Discussion introduction. Light is a transverse, electromagnetic wave that can be seen by the typical human. The wave nature of light was first illustrated through experiments on diffraction and interference. Like all electromagnetic waves, light can travel through a vacuum.
