Answers. 1. A quantum of energy is the energy difference between the two allowed values in a set. It is a tiny jump that moves from one value to another without ever reaching intermediate values. 2. The photoelectric effect was especially significant in the field of quantum theory because it essentially proved the necessity of this new field.

Quantum Theory - Chemistry LibreTexts

Best Answer: Quantum theory is the explanation for the nature and behavior of the smallest packets of energy (called photons), of atoms and of the parts of them that interact. Unlike Newtonian physics, this subject depends on probabilities. Quantum theory is able to make compatible the properties of the ...

9. Describe the property of the electron that each of the four Quantum Numbers exhibit. n - Principal Quantum Number . l - Angular Momentum Quantum Number . ml - Magnetic Quantum Number . ms - Spin Quantum Number . 10. Which of the following sets of quantum numbers is NOT permissible? (answer yes or no)

Quantum Theory of the Atom Worksheet

There is the quantum duality theory. This says that a quantum has both corpuscular and wave properties. Both the photon and the electron, for examples, have been shown to have both particle and wave characteristics. A major underlying characteristic of quantum mechanics is that the quanta cannot be deterministically defined.
