Physics (from Ancient Greek: φυσική (ἐπιστήμη), romanized: physikḗ (epistḗmē), lit. 'knowledge of nature', from φύσις phýsis "nature") is the natural science that studies matter, its motion, and behavior through space and time, and that studies the related entities of energy and force. Physics is one of the most fundamental scientific disciplines, and its main goal is ...

The Standard Model of particle physics is the theory describing three of the four known fundamental forces (the electromagnetic, weak, and strong interactions, and not including the gravitational force) in the universe, as well as classifying all known elementary particles. It was developed in stages throughout the latter half of the 20th century, through the work of many scientists around the ...

In the aftermath of the dispiriting comments following last week's post on the Parapsychological Association, it seems worth spelling out in detail the claim that parapsychological phenomena are inconsistent with the known laws of physics. The main point here is that, while there are certainly many things that modern science does not understand, there are also many things that it does ...

The 4π is also in the Coulomb's constant. And you know how it was Planck who gave Einstein his big break? And how Planck length $\ell_p = \sqrt{(\hbar G/c^3)}$? Replace $\sqrt{(\hbar G)}$ with $4\pi n$ where n is a suitable value with the appropriate dimensionality.
