A case of great practical interest is illustrated in the figure. The duration of the  $x$  sequence is  $N$  (or less), and the duration of the  $h$  sequence is significantly less. Then many of the values of the circular convolution are identical to values of  $x * h$ , which is actually the desired result when the  $h$  sequence is a finite impulse response (FIR) filter.

A time-invariant (TIV) system has a time-dependent system function that is not a direct function of time. Such systems are regarded as a class of systems in the field of system analysis. The time-dependent system function is a function of the time-dependent input function. If this function depends only indirectly on the time-domain (via the input function, for example), then that is a system ...

(Oppenheim et al. 1997). The unilateral Laplace transform is implemented in the Wolfram Language as `LaplaceTransform[f[t], t, s]` and the inverse Laplace transform as `InverseRadonTransform`.. The inverse Laplace transform is known as the Bromwich integral, sometimes known as the Fourier-Mellin integral (see also the related Duhamel's convolution principle).

Siirtofunktio on matemaattinen esitys lineaarisen systeemin tulon ja lähdön riippuvuudesta. Siirtofunktio voidaan esittää mm. aikatasossa, Laplace-tasossa tai taajuustasossa. Usein siirtofunktiota käsitellään Laplace-tasossa, jolloin yhtälöt ovat yksinkertaisemmin käsiteltäviä.
