Exon Definition. An exon is a coding region of a gene that contains the information required to encode a protein. In eukaryotes, genes are made up of coding exons interspersed with non-coding introns. These introns are then removed to make a functioning messenger RNA that can be translated into a protein. Exon Structure

Nitrifier denitrification is the pathway of nitrification in which ammonia (NH_3) is oxidized to nitrite (NO_2^-) followed by the reduction of NO_2^- to nitric oxide (NO), nitrous oxide (N_2O) and molecular nitrogen (N_2). The transformations are carried out by autotrophic nitrifiers. Thus, nitrifier denitrification differs from coupled nitrification-denitrification, where denitrifiers ...

Role of nitrifier denitrification in the production of ...

I had intended this review not specifically as a criticism of Skinner's speculations regarding language, but rather as a more general critique of behaviorist (I would now prefer to say "empiricist") speculation as to the nature of higher mental processes. My reason for discussing Skinner's book in such detail was that it was the most careful and thoroughgoing presentation of such speculations ...

The primary result of mitosis is the division of the parent cell's genome into two complete daughter genomes. The genome comprises a number of chromosomes, complexes of tightly-coiled DNA that contain genetic information vital for proper cell function. Before mitosis, when DNA is replicated, each chromosome makes an identical copy of itself.

Erik Erikson was a follower of Sigmund Freud who broke with his teacher over the fundamental point of what motivates or drives human behavior. For Freud it was biology, or more specifically, the biological instincts of life and aggression. For Erikson, who was not trained in biology and/or the medical sciences (unlike Freud and many of his contemporaries), the most important force driving ...
