were light grayish-green due to the presence of lichens. Most of the peppered moths in the area were light colored with dark spots. As the industrial revolution progressed, the tree trunks became covered with soot (chimney smoke) and turned dark. Over a period of 45 years, the dark variety of the peppered moth became more common. Materials

### **peppered moth lab - University of Notre Dame**

As you capture the moths most easily visible against the tree surface, the moth populations change, illustrating the effects of natural selection. You are a bird hunting moths (both dark and light) that live on trees. ... Exploration Sheet Answer Key. Subscribers Only. Teacher Guide. Instructor only. Vocabulary Sheet.

### **Natural Selection Gizmo : ExploreLearning**

Natural Selection in Peppered Moth Populations suggested that the light forms were removed from the population by birds because they were so conspicuous. Additional support for this idea came from non-industrial regions (and areas upwind from polluters) where the mottled form greatly outnumbered the melanic moths.
