This established the first strong link between early cognitive development and the functions of a specific brain region. That gave encouragement to others that rigorous experimental work addressing brain-behavior relations was possible in infants. It also fundamentally altered the scientific understanding of PFC early in development; clearly it was not silent as accepted wisdom had held.

Clearly, something has to change in order for latency to get low enough for AR/VR to work well. On the tracking end, the obvious solution is use both optical tracking and an IMU, via sensor fusion. The IMU can be used to provide very low-latency state, and optical tracking can be used to correct the IMU's drift.
