Some of the major unsolved problems in physics are theoretical, meaning that existing theories seem incapable of explaining a certain observed phenomenon or experimental result. The others are experimental, meaning that there is a difficulty in creating an experiment to test a proposed theory or investigate a phenomenon in greater detail.. There are still some deficiencies in the Standard ...

I actually find the results of this poll exciting, and heartening. Things would be much more depressing in my view if physicists weren't thinking as much about this issue, or if a majority of physicists had one favorite interpretation of quantum mechanics without being able to adequately back up any interpretation at this time.

While redshift can be used to tell us about the recession velocity of (non relativistic) galaxies, we also need to find a way to measure the distance to these galaxies. Astronomers have two main methods to measure these distances; parallax (more parallax here) and cepheid variable stars - there's a Khan Academy video on cepheid variable stars.
