A camera works with the light of the visible spectrum or with other portions of the electromagnetic spectrum. A still camera is an optical device which creates a single image of an object or scene and records it on an electronic sensor or photographic film. All cameras use the same basic design: light enters an enclosed box through a converging/convex lens and an image is recorded on a light ...

We have been created fearfully and wonderfully by our Creator God, and the human body showcases God's intricate design. Design features are evident in the structures and functions of each of the body systems. I present a design approach to the study of human anatomy and physiology from a biblical worldview.
