Permutations. The concept of permutation is used for the arrangement of objects in a specific order i.e. whenever the order is important, permutation is used.. The total number of permutations on a set of n distinct objects is given by $n!$ and is denoted as $n P n = n!$. The total number of permutations on a set of n objects taken r at a time is given by $n P r = \frac{n!}{(n-r)!}$

In general, an arrangement of objects is simply a grouping of them. The number of "arrangements" of n items is given either by a combination (order is ignored) or permutation (order is significant). The division of space into cells by a collection of hyperplanes (Agarwal and Sharir 2000) is also called an arrangement.

In cryptography, RC4 (Rivest Cipher 4 also known as ARC4 or ARCFOUR meaning Alleged RC4, see below) is a stream cipher. While remarkable for its simplicity and speed in software, multiple vulnerabilities have been discovered in RC4, rendering it insecure. It is especially vulnerable when the beginning of the output keystream is not discarded, or when nonrandom or related keys are used.
