The geometric algebra (GA) of a vector space is an algebra over a field, noted for its multiplication operation called the geometric product on a space of elements called multivectors, which is a superset of both the scalars and the vector space. Mathematically, a geometric algebra may be defined as the Clifford algebra of a vector space with a quadratic form.

### **Geometric algebra - Wikipedia**

In the event that the set in is an interval , the "subscript-superscript" notation from is usually adopted. Another generalization of the Riemann integral is the Stieltjes integral, where the integrand function defined on a closed interval can be integrated against a real-valued bounded function defined on , the result of which has the form

The divergence of a vector field  $F$ , denoted  $\text{div}(F)$  or  $\text{del} \cdot F$  (the notation used in this work), is defined by a limit of the surface integral  $\text{del} \cdot F = \lim_{V \rightarrow 0} (\oint_{\partial V} F \cdot da) / V$  (1) where the surface integral gives the value of  $F$  integrated over a closed infinitesimal boundary surface  $S = \partial V$  surrounding a volume element  $V$ , which is taken to size zero using a limiting process.
