**Quadratic Solutions**

The values of  $x$  that satisfy the equation are called solutions of the equation, and roots or zeros of its left-hand side. A quadratic equation has at most two solutions. If there is no real solution, there are two complex solutions. If there is only one solution, one says that it is a double root. So a quadratic equation has always two roots ...

There is another connection between the solutions from the Quadratic Formula and the graph of the parabola: you can tell how many x-intercepts you're going to have from the value inside the square root. The argument (that is, the contents) of the square root, being the expression  $b^2 - 4ac$ , is called the "discriminant" because, by using its value, you can "discriminate" between (that is, be ...

The solutions of quadratic equations can be using the quadratic formula. There are other methods of finding the solutions of quadratic equations too, such as factoring, completing the square, or graphing. Since quadratic equations have the highest power of 2, there will always be two solutions for  $x$  that would be coming up.
