13 Monohybrid Crosses and Mendel's Principle of Segregation! A monohybrid cross involves true-breeding strains that differ in a single trait. To determine whether both parents contribute equally to

Mendelian Genetics - California State University, Northridge

Self-pollination is when pollen from the same plant arrives at the stigma of a flower (in flowering plants) or at the ovule (in gymnosperms). There are two types of self-pollination: in autogamy, pollen is transferred to the stigma of the same flower; in geitonogamy, pollen is transferred from the anther of one flower to the stigma of another flower on the same flowering plant, or from ...

It's Genetics... Is it common to encounter news accounts of some new discovery that some trait is "Genetic" or that it is explained by genetics.

Genetics [Athro, Limited: Biology]

Marker assisted selection or marker aided selection (MAS) is an indirect selection process where a trait of interest is selected based on a marker (morphological, biochemical or DNA/RNA variation) linked to a trait of interest (e.g. productivity, disease resistance, abiotic stress tolerance, and quality), rather than on the trait itself. This process has been extensively researched and ...

Marker-assisted selection - Wikipedia

What is VSH? USDA ARS scientists Dr. John Harbo and Dr. Jeffrey Harris at the Honey Bee Breeding Laboratory in Baton Rouge, Louisiana, have defined and tested a trait of the honeybee which appeared to suppress mite reproduction (SMR). Recently it has been better defined as "varroa sensitive hygiene (VSH)."

Varroa Sensitive Hygiene VSH Breeder Queens

21 ABO Antigens
Type A individuals have the A antigen on their RBCs, and anti-B antibodies in their blood. Their genotype is I^A/I^A or I^A/i.
Type B individuals have the B antigen

After an hour on a plane, two in a taxi, three on a decrepit ferry, and then four more on buses driven madly along the tops of sheer cliffs by Greeks on cell phones, I rolled up to the front door ...

Beware of Greeks Bearing Bonds | Vanity Fair

When combining two crops using standard agricultural techniques, genes are allowed to mix at random. A typical example is Triticale, a synthetic hybrid between wheat and rye grown in Europe, which is the result of combining 50,000 largely untested genes, 25,000 from each species. 10 GM crops, in contrast, have specific genes inserted to produce the same desired effect.
